Nov 2019 - Present  
QlikView • Qlik

**Work experience** Full Stack Software Developer Nov 2013 - Sep 2019 Finantech 5 years 11 months  
Creation of a financial information interpretation system from the provider SIX Financial Information, integrating information into internal applications. In this project I was responsible for fetching the information from an FTP server via Win. Batches and pull this

information from EDIFACT files and insert them into the Oracle Database to be processed according a set of rules. The information was processed with an Information Map (set of rules regarding how the information was stored and managed in the EDIFACT file) that the provider would release thought the year, that later was automatized to not disrupt the client's services with the updates. (SQL; PL / SQL; Windows Batches; FTP connection;) Developed market modules, asset management modules and instrument fact sheets modules for a website intended for internal and over-the-counter use of financial information. In all the modules there was always an option to Upload or Download information, as well as normal information inputs via page forms. HighCharts and Echarts, were used to display graphical information. In this project I was responsible for front-end and back-end development. (WebForms - C #, Html, JS, CSS; SQL; PL / SQL) Developed a website for the Cape Verde Stock Exchange that allows users of Cape Verde banks to trade securities and see information regarding the securities. In this project I was responsible for part of the front-end, basically for the pages that were related to former projects that had a relation to this one like the Market Modules and Instrument fact sheets. (WebForms - C #, Html, JS, CSS; SQL; PL / SQL) Developed a web tool to be used by users with little capital and/or experience, that would allow the bank to manage their portfolio based on the portfolio proposals suggested by Bank's financial manager. Tool known as Robot Advisory. In this project I was responsible for front-end and back-end development. (WebForms - C #, Html, JS, CSS; SQL; PL / SQL) Small project from time to time with Perl, PowerShell, Python and GoLang. These projects would normally only last about 2 to 5 days. For example, automated deploys, file conversions, fetching files from FTP Servers to be uploaded or sent via email, etc. Used Git for version control and client deployment. Work management was based on Scrum.

Internship Jun 2013 - Sep 2013 Marques Soares 4 months

Modulation and Creation of a stock management software with built using AS/400 on a RPG system with Java emailing. I was responsible for analysing and developing a system that would manage stock between all of the company's stores in the country with a follow up mailing system. Coordinated with project management staff on timelines and project scope. Collaborated with other developers to identify and fix several other bugs and errors in other areas of the company's software.

Receptionist and Tecnical Support in the Library Oct 2010 - Jun 2013 Universidade Portucalense (UPT) 2 years 9 months

Receptionist in the library. Technical Services such as registration and management of books, theses, magazines, etc ... Computer Services as implementation of a COTS called Koha with very minor code changes, but mostly just configurating the system to the Library needs and requirements; wireless network configuration across multiple computers, smartphones and tablets across all OSs.
